The double liquid screw valve is a device used to accurately mix and dispense two-component liquids. Unlike a single-liquid screw valve, it can handle two liquid materials of different components at the same time, and mix and dispense them according to a set ratio to ensure uniform mixing and precise dispensing of the materials. Double liquid screw valves are widely used in situations where two materials need to be mixed to solidify or function, such as industrial bonding, electronic potting, and sealing applications in automotive manufacturing.
