## Abstracts

The global Double Mechanical Seal for Stirring market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The double mechanical seal for stirring is a mechanical seal specially designed for stirring equipment, which has reliable sealing performance, wear resistance, corrosion resistance and high temperature resistance. It consists of two sealing surfaces, one is connected to the rotating shaft and the other is connected to the static equipment, which can effectively prevent the leakage of the medium in the stirring equipment. Stirring double mechanical seals are usually equipped with conditioning and flushing devices to lubricate and cool the sealing faces, reduce friction and heat, and prevent the accumulation of solid particles. It is widely used in chemical, pharmaceutical, food and beverage industries to ensure the reliability and safety of mixing equipment and the requirements of industrial processes.
