According to our (Global Info Research) latest study, the global Double Point Press market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Double-point punching machines can obtain a larger table width than single-point punching machines. What they have in common is that there is only one main motor and only one slider. The difference is that the double point has two crankshafts, connecting rods, large gears, etc. The double-point punch press is very suitable for large-table progressive die stamping, and can appropriately withstand certain eccentric load stamping (the stress point and the pressure center do not coincide).
