According to our (Global Info Research) latest study, the global Double Roller CNC Spinning Machine market size was valued at US\$ 65 million in 2024 and is forecast to a readjusted size of USD 88.2 million by 2031 with a CAGR of 4.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Double Roller CNC spinning machine? is a metal plastic forming machine, mainly used for chipless forming of metal products. Pressure is applied to the metal blank through two rotating wheels, causing it to undergo plastic deformation along a preset path, eventually forming complex curved parts (such as trumpet-shaped, conical, parabolic, etc.). Compared with the traditional single-wheel spinning process, its core advantage lies in high processing accuracy and high production efficiency. The double roller CNC spinning machine usually adopts a cold rolling method, using two spinning wheels to work under the control of a CNC system, which can realize automated processing and control, and has high precision and reliability?.

As the manufacturing industry transforms towards automation and intelligence, the market demand for double-roller CNC spinning machines is growing steadily. On the technical level, the equipment is developing towards a higher level of intelligence, such as the integrated visual recognition system to monitor the processing status in real time, and the modular design can quickly replace the tool head to adapt to diversified production needs. In addition, the concept of green manufacturing promotes the research and development of clean energy-driven equipment, such as the use of low-

energy motors and optimized hydraulic system design.
