## Abstracts

A double-row terminal block is an electrical connection device with two rows of connection points for connecting multiple wires or cables. Each row of connection points usually has multiple holes, allowing multiple wires to be connected to the same terminal at the same time. This design allows more circuit connections to be implemented in a limited space, improving the density and efficiency of circuit connections. Double row terminal blocks are often used in electrical equipment, control panels or other applications where multiple circuits need to be connected. They are suitable for a variety of electrical systems of varying sizes and complexity, providing a convenient, safe and reliable electrical connection solution.

According to our (Global Info Research) latest study, the global Double Row Terminal Block market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
