Abstracts

Rotary tiller is a tillage machine that is matched with tractor to complete tilling and harrowing operations. Because of its strong soil crushing ability and flat surface after ploughing, it has been widely used; at the same time, it can cut the root stubble buried below the surface, which is convenient for the operation of the planter and provides a good seed bed for later planting. According to the configuration of the rotary tiller shaft, it is divided into three types: horizontal shaft type, vertical shaft type and inclined type. The correct use and adjustment of the rotary tiller is very important to maintain its good technical condition and ensure the quality of farming.
