## Abstracts

According to our (Global Info Research) latest study, the global Double Shutoff Coupling market size was valued at US\$ 2907 million in 2025 and is forecast to a readjusted size of US\$ 4780 million by 2032 with a CAGR of 7.3% during review period.

A Double Shutoff Coupling is a type of fluid connector with automatic shutoff valves on both ends. When disconnected, it simultaneously blocks the fluid flow, preventing leakage of liquids or gases. It is widely used in hydraulic systems, pneumatic systems, coolant circulation, and laboratory or industrial fluid transfer applications. The coupling is designed for frequent connect and disconnect operations, offering high safety and convenience. In 2025, global embedded solid-state storage production reached approximately 51.36 M units, with an average global market price of around US\$ 55 per unit. Annual production capacity is 55 M units. Gross Profit Margin: 30%. The embedded solid-state storage industry chain is relatively mature and vertically integrated. Upstream mainly includes high-quality NAND flash memory, DRAM, and control chip manufacturers, as well as raw materials for PCBs and packaging. Midstream focuses on module assembly, firmware development, and testing, while downstream covers consumer electronics, industrial devices, automotive electronics, and IoT applications. Efficient coordination among these layers ensures stable supply, high product reliability, and competitive pricing in the market. Embedded solid-state storage represents a strategic growth segment with strong long-term potential. Its applications in automotive, industrial automation, and IoT make it resilient to traditional PC market fluctuations. Companies that invest in high-performance, low-power, and durable storage solutions will likely gain a competitive edge. I also see opportunities in optimizing supply chain efficiency and advancing memory integration technologies to further reduce costs and increase performance.
