## Abstracts

According to our (Global Info Research) latest study, the global Double-station Glove Box market size was valued at US\$ 140 million in 2024 and is forecast to a readjusted size of USD 186 million by 2031 with a CAGR of 4.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The double-station glove box is a laboratory equipment with two independent operating spaces, each of which is equipped with a set of gloves so that the operator can perform experiments or operations without direct contact with the external environment. The interior of the double-station glove box is divided into two independent operating spaces, each of which can be controlled separately without affecting each other. The double-station glove box has good sealing performance, which can effectively prevent the outside air, moisture and microorganisms from entering the operating space, ensuring the accuracy and reliability of the experiment or operation. Because it has two independent operating spaces, the double-station glove box can carry out different experiments or operations at the same time, improving work efficiency. For example, materials can be processed at one station and tested or analyzed at another station.
