## Abstracts

The global Double-walled Storage Tank market size is expected to reach \$ 9828 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

In 2025, global sales of double-walled storage tanks reached 380,000 units, with an average selling price of US\$16,000. Double-walled tanks are safety storage devices with a secondary protective structure formed by an inner and outer tank. They are mainly used for leak-proof storage of oil, chemicals, and hazardous liquids, with their core value lying in improving environmental safety and compliance. Upstream raw materials primarily consist of carbon steel, stainless steel, fiberglass resin, and anti-corrosion coating materials. On average, each unit consumes approximately 1.8 tons of steel and 120 kg of resin and coating materials. Midstream processes, including molding, welding, and testing, are handled by specialized tank manufacturers. Downstream applications mainly supply gas stations, chemical industrial parks, industrial enterprises, municipal emergency reserves, and new energy supporting facilities. The oil and gas and chemical sectors account for approximately 62% of consumption, municipal and environmental protection sectors account for approximately 23%, and other industrial applications account for approximately 15%. The total global designed production capacity is approximately 520,000 units per year, with an industry average capacity utilization rate of approximately 73% and an overall gross profit margin ranging from 28% to 35%. The future lies in increasingly stringent environmental regulations, the release of demand for the replacement of underground storage tanks with double-walled tanks, and the expansion of new energy liquid media storage scenarios. Coupled with the advancement of infrastructure construction in developing countries, double-walled storage tanks will continue to have stable demand and mid-to-high-end product opportunities driven by safety upgrades and replacement of existing stock.
