According to our (Global Info Research) latest study, the global Double-way Direct Acting Solenoid Valve market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The double-way direct acting solenoid valve is a common solenoid valve used to control the flow of liquid or gas in the pipeline. It has two channels (inlet and outlet), and the channel is closed when no current is applied, and the channel is open when the current is applied. This type of solenoid valve usually controls the opening and closing of the valve by controlling the solenoid coil, thus achieving the control of the fluid.
