The global Double-way Direct Acting Solenoid Valve market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The double-way direct acting solenoid valve is a common solenoid valve used to control the flow of liquid or gas in the pipeline. It has two channels (inlet and outlet), and the channel is closed when no current is applied, and the channel is open when the current is applied. This type of solenoid valve usually controls the opening and closing of the valve by controlling the solenoid coil, thus achieving the control of the fluid.
