In 2025, the global production capacity of Double Worm Speed Reducers was approximately 2.55 million units.

Double Worm Speed Reducers are mechanical transmission devices using two-stage worm gear reduction to achieve higher reduction ratios, compact structure, and stable torque output. They are used in conveyors, lifting equipment, packaging machines, automation systems, and machinery requiring low-speed, high-torque motion.

The industrial chain includes upstream cast housings, worm gears, shafts, bearings, lubricants, seals, and machining tools. Midstream covers gear cutting, heat treatment, housing machining, assembly, lubrication, testing, and painting. Downstream applications mainly include industrial machinery, logistics equipment, packaging systems, elevators, conveyors, and automation lines.

Industrial automation machinery and transmission equipment upgrading promote the development of double worm speed reducers. They offer large reduction ratio, stable transmission and self-locking performance to meet low-speed high-torque working

requirements. Compact structure design and wear-resistant material optimization enhance operational durability.
