Dovetail slide stages are mechanical positioning devices that use a dovetail-shaped guide rail and mating carriage to provide stable, linear motion along a single axis. Known for their durability and high load-bearing capacity, these stages offer smooth, backlash-free movement without the use of ball or roller bearings. Adjustment is typically manual via a lead screw, micrometer, or thumbscrew, making them ideal for coarse or mid-precision positioning tasks. Dovetail slide stages are widely used in industrial assembly, inspection, and research applications where robust construction, rigidity, and vibration resistance are essential, especially in environments that do not require ultra-high precision or automated control.
