A drain separator is a device that separates and eliminates condensate, which is water condensed from compressed air and steam after the air loses heat. It is also called a brackish water separator. Drain separators are used in air conditioning equipment and various industrial facilities.

There are two types of condensate separators: the in-line type, which is incorporated between the compressor and piping, and the trap type, which eliminates condensate flowing into the trap from branch pipes by attaching an obstruction plate or the like in the piping. The most famous in-line type of drain separator is the cyclone separator, which uses the centrifugal force of high-speed rotation to separate suspended condensate contained in the air, which is difficult to remove.

This report is a detailed and comprehensive analysis for global Drain Separator market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application.
