Abstracts

The global Drainage Robot market size is expected to reach \$ 133 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

In 2025, global sales volume of Drainage Robot was approximately 450 units, with an average global market price of around USD 110,000 per unit. Gross margins of major manufacturers were generally in the range of 25%-40%.

Drainage Robot is a type of mobile intelligent drainage equipment designed for urban flood control, emergency rescue and complex waterlogging scenarios. It typically consists of a crawler or wheeled mobile chassis, drainage pump or pumping system, power system, hydraulic or electric control system, inlet and outlet pipelines, remote-control module, and sensing and monitoring modules. The product can enter areas that are difficult or unsafe for personnel to access and perform rapid drainage operations. Compared with conventional drainage pumps and drainage pump trucks, Drainage Robot places greater emphasis on mobile deployment, remote operation, mobility on complex terrain, and operation in confined spaces. It can be classified by drainage flow rate, mobile chassis type and functional integration.

The upstream of Drainage Robot mainly includes water pumps, diesel engines or electric motors, hydraulic components, electric control systems, crawler or wheeled chassis, sensors, pipelines, valves, metal structural parts and batteries. In the midstream, manufacturers develop products with different flow rates, heads and operating capabilities through complete-machine structural design, pumping system integration, power matching, chassis adaptation, remote-control development and whole-machine testing. Downstream applications mainly include urban flood drainage, underground space drainage, tunnel and culvert drainage, and other emergency rescue

scenarios. Drainage Robot is an important type of emergency equipment for improving urban flood drainage efficiency and reducing the risks associated with personnel operating in hazardous waterlogged environments.
