According to our (Global Info Research) latest study, the global Draw Wire Position Sensors (String Pots) market size was valued at US\$ 3278 million in 2025 and is forecast to a readjusted size of US\$ 4586 million by 2032 with a CAGR of 5.0% during review period.

The draw wire position sensor is a device used to accurately measure linear displacement. It is connected to a moving object through a flexible steel cable (draw rope). As the target object moves, the draw rope is pulled out or retracted, driving the internal precision encoder or potentiometer to rotate, thereby converting mechanical motion into electrical signal output. It has high accuracy, long range and compact design. The sensor has excellent anti-interference ability and environmental adaptability, and can work stably under harsh conditions such as high temperature, low temperature, humidity and vibration. It supports a variety of signal output interfaces, such as analog voltage, current, serial communication, etc., which is easy to integrate with the control system.
