Abstracts

The global Drawing Board with Flash Cards market size is expected to reach \$ 224 million by 2032, rising at a market growth of 3.9% CAGR during the forecast period (2026-2032).

A drawing board with flash cards is an electronic educational toy designed specifically for children. Its core features include an erasable screen and a set of pre-set pattern cards. Children insert different themed cards into the device's slots to obtain the corresponding pattern outlines as templates for tracing. They then use the included pressure-sensitive pen or stylus to trace and fill in the patterns on the screen, easily completing a drawing. In 2025, the global production of drawing board with flash cards is estimated to be approximately 8.3 million units, with an average selling price of about \$20 per unit and a gross profit margin of approximately 35%. The annual production capacity per line is about 100,000 units. The upstream supply chain of card-based drawing boards mainly consists of suppliers of electronic components such as LCD modules, chip sensors, and plastic raw materials; the midstream comprises brand owners and manufacturers responsible for driving R&D, board assembly, and overall testing; and the downstream reaches users through consumer electronics stores, online e-commerce platforms, and professional art supply channels. Demand stems from the expanding application of digital teaching and online annotation in the education sector, as well as the growing consumption of hobbyists for beginner practice and interest cultivation.

The core market drivers of the drawing board with flash cards can be summarized as follows: First, the deepening of the 'education through entertainment' consumption trend, with parents increasingly emphasizing products that combine games with early education (such as cognition, writing, and painting); second, the anxiety over screen

time has driven the demand for interactive toys without electronic screens and with eye-protection features; third, product innovation integrates multi-functionality (such as painting, learning cards, light and sound interaction), enhancing the added value and appeal of individual products; fourth, the word-of-mouth promotion and visual marketing effect brought about by the sharing of parent-child content on social media and short videos.
