A drawn arc stud welder is a special type of welding equipment used to weld studs (also called bolts) to workpieces. It is mainly used to join metal components and is widely used in structural and mechanical engineering. A drawn arc stud welder works by generating an electric arc that melts the welding material (usually a welding electrode or wire) and fuses the stud to the surface of the workpiece to form a strong connection. Compared with traditional stud connection methods such as threaded connection, drawn arc stud welding machine can provide higher connection strength and reliability. The advantages of drawn arc stud welding machine include fast welding speed, high welding strength, clean weld seam and so on. It is widely used in construction, bridges, machinery manufacturing, shipbuilding and other fields, and is especially suitable for applications that require high-strength connections and increase production efficiency.
