Abstracts

According to our (Global Info Research) latest study, the global Dredging Excavator market size was valued at USD 442.7 million in 2023 and is forecast to a readjusted size of USD 606.2 million by 2030 with a CAGR of 4.6% during review period.

Excavators are heavyweight construction equipment. Its so-called house has a cab, a boom, a dipper, and a bucket. The house is a rotating platform that rests upon an undercarriage with a track system. An operator controls the machine from the cab. A boom is connected to the house, and has a stick attached to the end known as a dipper, providing adequate digging force to pull the bucket through the earth. Buckets come in a lot of sizes and shapes to perform a variety of functions. Excavators used on construction sites are used to dig holes, trenches and foundations. Besides construction, excavators are also used in the mining industry and in forestry work. Other applications include demolitions and dredging projects.

Dredging excavators are a type of excavator designed to be used for dredging in shallow water. They are better equipped with their pontoon undercarriages for operation in swamp/wetlands operations that traditional barge-mounted dredgers are ill-equipped to handle. Barge-mounted dredgers are better suited for deeper fresh waterways.

In terms of product types, Dredging Excavator can be divided into Large Dredging Excavators, Medium Dredging Excavators and Small Dredging Excavators. In 2019, Medium Dredging Excavators occupy the largest market share, accounting for about 56%.

From the perspective of product application, Dredging Excavator can be divided into

four categories: Dredging, Pipeline Construction, Environmental Remediation and Levee Construction. Among them, Dredging occupies the largest market share of about 37% in 2019, followed by Environmental Remediation, accounting for about 26% of the market share.
