According to our (Global Info Research) latest study, the global Drilling Fluid Thickener market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Common types of drilling fluid thickeners include xanthan gum, guar gum, and carboxymethyl cellulose. The choice of thickener depends on factors such as the type of drilling operation, the properties of the drilling fluid, and the environmental conditions.

A drilling fluid thickener is a substance that is added to drilling fluids to increase their viscosity and provide better suspension of solids during drilling operations. These thickeners are typically made from natural or synthetic polymers that can absorb large amounts of water and swell, forming a gel-like substance that thickens the drilling fluid.
