Drilling Grade Carboxymethyl Cellulose (CMC) is a type of water-soluble polymer that is commonly used in the oil and gas industry as a drilling fluid additive. It is derived from cellulose and is chemically modified to have carboxymethyl groups that impart unique properties such as high viscosity, suspension, and lubrication. These properties make it an effective additive for drilling muds, which are used to lubricate and cool drilling bits, control formation pressures, and carry drilled cuttings to the surface. Drilling Grade CMC is available in various grades and viscosities, depending on the specific application requirements.
