Drilling Grade Polyanionic Cellulose (PAC) is a type of water-soluble polymer that is commonly used as a drilling fluid additive in the oil and gas industry. It is derived from cellulose and is chemically modified to have anionic groups that impart unique properties such as high viscosity, fluid loss control, and shale inhibition. These properties make it an effective additive for drilling muds, which are used to lubricate and cool drilling bits, control formation pressures, and carry drilled cuttings to the surface. Drilling Grade PAC is available in various grades and viscosities, depending on the specific application requirements.
