Abstracts

The global Drilling Hydraulic Elevator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The hydraulic elevator is used to latch around the top of pipe joints in the drill string. Once latched, the driller can raise and lower pipe in and out of the hole. Rig crews attach the elevator to the hook or Top Drive with two forged high-grade steel rods called links or bails. One end of the link fits into the link ears on the hook or Top Drive. Link locking arms secure the links into the ears. Crew members then attach the elevator to the other end of the links. Most elevators are hinged and rig crews open and close them by operating the latch with two handles on each side.

This report studies the global Drilling Hydraulic Elevator production, demand, key manufacturers, and key regions.
