Abstracts

The increase in the energy demand has resulted in the rise in oil & gas production from the regions such as North America and the Middle East. Due to this increase, there is increase in the exploration & production activities in the region. The drilling activity process plays a crucial role for oil & gas Exploration and Production (E&P). This increase in the drilling activities results in the surge of the waste produced while drilling which comprises of the drilling mud and cuttings. Therefore, it is very important to have a suitable waste management application for drilling processes, safeguarding the environment. Increase in production and exploration activities provides opportunities of drilling waste management.
