Abstracts

The global Drinking Water Quality Testing Services market size is expected to reach \$ 1401 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

To address the problems of traditional water quality testing, such as reliance on laboratory submissions, long result feedback cycles, and a lack of self-monitoring methods for households, drinking water quality testing services have emerged. Since the increase in public health awareness and the tightening of drinking water safety standards, the field of household and community water quality monitoring has developed significantly. Currently, drinking water quality testing services have evolved into a professional technical service system encompassing various types, including precise laboratory analysis, rapid on-site testing, online real-time monitoring, and multi-indicator screening kits. These services are widely used in residential homes, school drinking water systems, community water supply terminals, commercial buildings, and public places, effectively ensuring drinking water safety, health quality, and convenient daily monitoring.
