A drive in test chamber is a large-scale environmental simulation testing equipment capable of accommodating an entire automobile. It can simulate various climatic conditions and environmental factors. Unlike traditional test chambers for components or small-scale equipment, it allows entire vehicles to be driven into the test chamber. This setup enables not only the testing of specific equipment but also comprehensive, multi-angle environmental adaptability tests directly on the entire automobile. It serves as a reliable means to ensure the stability and durability of vehicle performance.
