Abstracts

According to our (Global Info Research) latest study, the global Driveaway Satellite Terminals market size was valued at US\$ 1612 million in 2024 and is forecast to a readjusted size of USD 4207 million by 2031 with a CAGR of 15.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Driveaway Satellite Terminal is a specialized SATCOM (Satellite Communication) system that is integrated onto the rooftop of a vehicle, allowing users to establish two-way satellite communication links quickly and efficiently. Unlike flyaway systems that require manual unpacking and setup, or manpack terminals that need to be carried and pointed manually, a driveaway terminal can be activated directly from within the vehicle, often through a fully automated satellite acquisition system. The terminal can align itself with the desired satellite and begin transmitting and receiving data, significantly reducing setup time and the need for technical expertise in the field. These terminals are ruggedized and weather-resistant, capable of enduring harsh outdoor conditions such as extreme heat, cold, wind, and rain. Built for both stationary and on-the-pause operations, some advanced models can even provide connectivity while the vehicle is in motion, although most are designed to deploy once the vehicle has stopped. This makes them incredibly useful for field teams that need rapid communication readiness, without the complexity of external setup.
