According to our (Global Info Research) latest study, the global Driver Training Management Software market size was valued at US\$ 169 million in 2025 and is forecast to a readjusted size of US\$ 259 million by 2032 with a CAGR of 6.3% during review period.

Driver Training Management Software (DTMS) is a digital tool designed to streamline, organize, and enhance the management of driver training programs. It is used by driving schools, fleet operators, or organizations involved in driver education and training to manage the entire training lifecycle, from scheduling and curriculum management to performance tracking and compliance monitoring. The software helps ensure that drivers receive proper training, assessment, and certification, all while maintaining compliance with local regulations.

The development of driver training management software is driven by multiple factors, including the strengthening of standardized supervision in the driver training industry, the inherent need to improve the operational efficiency of driving schools, students' expectations for convenient and transparent service experiences, and the maturity of artificial intelligence and mobile internet technologies. On the one hand, traffic management departments continue to promote reforms, mandating that driving schools connect to the regulatory platform and achieve traceability of the training process. On the other hand, driving schools urgently need to optimize instructor scheduling, vehicle management, training hour recording, exam booking, and financial accounting through digital systems to reduce labor costs and compliance risks. At the same time, students can register online, view courses, take mock exams, and track progress through mobile apps, promoting the intelligent and personalized upgrading of driver training services,

and jointly accelerating the popularization and functional deepening of driver training management software.
