According to our (Global Info Research) latest study, the global Driver Training and Testing System market size was valued at US\$ 296 million in 2025 and is forecast to a readjusted size of US\$ 447 million by 2032 with a CAGR of 6.2% during review period.

A Driver Training and Testing System (DTTS) is a comprehensive, automated platform designed to manage, monitor, and evaluate the training and testing of drivers. It is typically used by driving schools, government agencies, or organizations that require standardized driver assessments. The system integrates both the training and testing phases to ensure that drivers are properly educated, assessed, and certified according to relevant standards and regulations.

The development of driver training and testing systems is driven by multiple factors, including the continuous growth in motor vehicle ownership, increasingly stringent traffic safety regulations, rising demand for intelligent supervision, and accelerated integration of new technologies. On the one hand, to reduce traffic accident rates, the government promotes the standardization, normalization, and anti-cheating upgrades of driver testing, mandating the application of intelligent evaluation, full-process video recording, and data networking. On the other hand, the maturity of technologies such as artificial intelligence, 5G, high-precision positioning, and virtual simulation makes training more efficient, testing fairer, and management more transparent. At the same time, the public's demand for convenient and personalized driver training services is also prompting the industry to transform towards an online + offline integrated model, jointly driving the deep evolution of driver training and testing systems towards digitalization, automation, and intelligence.
