Drone Millimeter-Wave Radar Sensor is a compact radar sensing module used on unmanned aerial vehicles to detect obstacles, measure distance and support collision avoidance in complex environments. It usually operates in high-frequency millimeter-wave bands and can detect objects under dust, fog, weak light or partial visual obstruction. The product is used in industrial drones, logistics drones, agricultural drones, inspection drones, mapping drones and security patrol drones. The market includes onboard radar sensors and radar modules for drone obstacle avoidance, but excludes automotive radar, ordinary ultrasonic sensors and complete drones.

The industry chain includes radar chips, antennas, radio-frequency substrates, signal processing chips, printed circuit boards, connectors, housings, firmware, algorithms and testing equipment. Midstream production covers RF design, antenna integration,
