According to our (Global Info Research) latest study, the global Drone Oblique Photogrammetry market size was valued at US\$ 1493 million in 2025 and is forecast to a readjusted size of US\$ 3943 million by 2032 with a CAGR of 11.5% during review period.

Drone oblique photogrammetry refers to a UAV-based 3D geospatial data acquisition and modeling solution that uses gimbal cameras, five-lens oblique cameras, multi-camera arrays, or mapping payloads integrated with RTK/PPK positioning modules to capture nadir and oblique images of terrain, buildings, features, slopes, infrastructure, and construction sites. The captured images are processed through photogrammetry software for aerial triangulation, point-cloud generation, texture mapping, 3D mesh reconstruction, and result publishing, producing measurable and analyzable 3D reality models, 3D city models, digital-twin base data, orthomosaics, DSM/DTM, and 3D point clouds. It is not ordinary aerial photography or tilt-shift visual photography; it is a professional 3D spatial data capture and modeling technology used in surveying, GIS, urban planning, construction, power and energy, mining, and emergency management.
