Abstracts

According to our (Global Info Research) latest study, the global Drone Performance Equipment market size was valued at US\$ 170 million in 2025 and is forecast to a readjusted size of US\$ 448 million by 2032 with a CAGR of 13.0% during review period.

Drone performance equipment refers to the devices required for drone light show performances, including drones and control systems.

Technological progress and cost reduction

Positioning and communication technologies: The development of technologies such as RTK and 5G has enhanced the positioning accuracy of drone formations, improved communication reliability, allowed for larger-scale operations, and increased resistance to interference. This has directly improved the quality and safety of performances and lowered the technical threshold.

Battery technology: Higher energy density batteries have extended the flight duration of drones, enabling longer and more complex performances.

Software and algorithms: Automated formation design software and AI-assisted creative generation tools have significantly reduced the difficulty and time cost of creating performance content.

Mass production: As the industry chain matures, the manufacturing costs of performance-specific drones continue to decline, enabling more small and medium-sized performance companies and event organizers to afford drone performances.

Continuous expansion of application scenarios

Large-scale events and the entertainment industry: Olympic Games, World Cups, Super Bowls, large music festivals, theme park night shows, etc., have made drone performances a standard or core highlight. This demonstration effect has driven global demand.

Brand marketing and advertising: Drone performances offer an unprecedented way to display brand logos, new product outlines, or advertising slogans in the air. The social media dissemination effect and news value they bring are beyond those of traditional advertising. More and more luxury brands, car companies, and tech giants are using drone performances for marketing activities.

Cultural tourism and city landmarks: Many cities are using drone performances as a means to attract tourists, celebrate festivals, and illuminate the city's night scene, turning them into new 'city identities'.

Personal celebration market: With further cost reduction, it is not impossible that small-scale drone performances will appear in private celebrations such as weddings and birthday parties in the future. This will be a huge potential market.

Gradual improvement of policies and regulations

Aircraft management agencies worldwide (such as FAA, EASA) are gradually introducing regulations for drone swarm flights. Although regulation remains a challenge at present, the introduction of a clear and reasonable regulatory framework will clear obstacles for the healthy and orderly development of the market and enhance customer confidence.
