## Abstracts

The global Drone Wireless Charging In-Flight market size is expected to reach \$ 3188 million by 2032, rising at a market growth of 37.3% CAGR during the forecast period (2026-2032).

The drone wireless charging in-flight is a low-altitude, non-contact in-flight power replenishment technology specifically designed for drones. Through the coordinated work of the transmitter, airborne receiver, high-precision air-to-ground positioning and alignment unit, and anti-interference telemetry and communication unit, it enables drones to replenish power without physical contact while hovering or cruising at low speeds, completely breaking through the bottleneck of traditional ground charging that requires landing, manual intervention, and interruption of flight.

The global production of drone wireless charging in-flight is projected to reach 715 units by 2025, with an average price of \$454,000 per unit.

This report studies the global Drone Wireless Charging In-Flight production, demand, key manufacturers, and key regions.
