Drop Forged Components are metal parts that are manufactured through the drop forging process. In this process, a piece of metal, typically in the form of a billet or bar, is heated to a specific temperature to make it more malleable. Then, using a forging hammer or a press, force is repeatedly applied to the heated metal by dropping a heavy die onto it or by using a mechanical press to shape it. This imparts the desired shape and refines the internal structure of the metal, resulting in components with enhanced strength, durability, and dimensional accuracy. Drop forged components are widely used in various industries such as automotive, aerospace, construction, and machinery due to their superior mechanical properties.
