Drop Shape Analysis System is a scientific instrument used to measure the shape and behavior of liquid droplets, typically for determining surface and interfacial tension, contact angles, and wettability of solid surfaces. It operates by capturing high-resolution images or videos of a droplet on a surface or suspended in another liquid or gas, and analyzing the profile using advanced software algorithms. These systems are essential in material science, coatings, inkjet printing, biomedical applications, and surface chemistry research, where precise knowledge of interfacial interactions is critical.
