Abstracts

According to our (Global Info Research) latest study, the global Drop Weight Tear Test (DWTT) Services market size was valued at US\$ 152 million in 2025 and is forecast to a readjusted size of US\$ 217 million by 2032 with a CAGR of 5.3% during review period.

To address the difficulty in accurately assessing the potential risk of brittle fracture in long-distance oil and gas pipelines and large steel structures under low-temperature environments, and the lack of reliable data for material toughness selection, the Drop Weight Tear Test (DWTT) service emerged. With the development of high-toughness pipeline steel and the increasing demand for energy transportation in harsh environments such as extreme cold and deep sea, this service gained widespread application and development in the oil and gas industry in the mid-to-late 20th century. Today, DWTT service has become a specialized material testing service encompassing various methods, including standard normal tearing and instrumented dynamic testing. It is specifically applied to the evaluation of oil and gas transmission pipes, thick plates, welded joints, and high-grade steel materials. By simulating fracture behavior under impact load conditions, it can accurately determine the material's tear resistance, fracture surface shear area percentage, and ductile-brittle transition temperature, providing core criteria for pipeline design, material certification, safety standard formulation, and brittle fracture prevention design.
