According to our (Global Info Research) latest study, the global Drosophila Tube market size was valued at US\$ 12.3 million in 2024 and is forecast to a readjusted size of USD 24.2 million by 2031 with a CAGR of 10.1% during review period.

Drosophila tube is a transparent tube used for fruit fly experiments, mainly made of polypropylene (PP) or polystyrene (PS), usually available in two specifications: fine mouthed tube and coarse mouthed tube. Its characteristics include high transparency, resistance to breakage, ease of experimental observation, and affordability. In experiments, fruit fly tubes are commonly used to observe and study gene expression in fruit flies, as well as to culture fruit flies.

Drosophila tubes are commonly used consumables for laboratory fruit fly cultivation and related experiments. Currently, the market size is relatively small, but with the significant growth of the fruit fly breeding equipment market, the demand for drosophila tubes is also constantly increasing. Major manufacturing companies include Genesee Scientific, Fisher Scientific, Crystalgen, Labgic, Fangjing Biotechnology, Runlab and other companies. These manufacturers typically use environmentally friendly materials and design drosophila tubes that are easy to observe, handle, and clean to improve the accuracy and efficiency of experiments. Based on the experimental needs of fruit flies in laboratories, universities, and other research institutions, sustainable, innovative, and multifunctional drosophila tubes will become the development trend of the drosophila tube market in the future.
