According to our (Global Info Research) latest study, the global Drug Cold Chain Transportation Service market size was valued at US\$ 4023 million in 2025 and is forecast to a readjusted size of US\$ 6866 million by 2032 with a CAGR of 7.9% during review period.

Drug cold chain transportation services refer to services that use professional temperature control and monitoring technology throughout the entire drug supply chain to ensure that drugs are always kept within a safe temperature range during transportation. These services cover the entire process from drug production to distribution, including temperature-controlled transportation, temperature monitoring and recording, professional packaging and containers, rapid distribution and priority processing, etc., aiming to ensure the quality and effectiveness of drugs and meet the pharmaceutical industry's requirements for drugs. Strict requirements for transportation.

The pharmaceutical cold chain transportation service industry chain mainly consists of upstream cold chain equipment and packaging material suppliers, midstream cold chain logistics service providers, and downstream pharmaceutical production and distribution companies. Upstream includes manufacturers of refrigerated trucks, refrigerated containers, temperature control equipment, temperature monitoring systems, cold chain packaging materials (insulated boxes, phase change materials, dry ice, etc.), and refrigeration equipment, providing basic hardware and technical support for cold chain transportation. The gross profit margin in this segment is generally between 20% and 40%. Midstream consists of pharmaceutical cold chain transportation service providers, responsible for the entire temperature control management of pharmaceuticals during transportation, warehousing, and distribution, including cold chain trunk transportation,

cold storage, temperature monitoring, and compliance management. Due to the high safety and compliance requirements of pharmaceutical cold chain transportation, the added value of these services is significant, and the gross profit margin in this segment is typically between 25% and 45%. Downstream mainly consists of pharmaceutical companies, biopharmaceutical companies, vaccine manufacturers, pharmaceutical distribution companies, and end users such as hospitals and pharmacies. With the rapid development of biologics, vaccines, and cell therapy drugs, and the increasing global pharmaceutical regulatory requirements for temperature control in drug storage and transportation, the demand for cold chain transportation services for pharmaceuticals continues to grow, and the industry is developing towards digital monitoring, full traceability, and high-standard temperature-controlled transportation.

The development and popularization of drug cold chain transportation services provide important support for the sustainable development of the pharmaceutical industry and the improvement of global health. Through professional temperature control and monitoring technology, drugs can be kept within a safe temperature range during transportation, ensuring the quality and effectiveness of drugs. This not only helps meet the needs of medical institutions, pharmaceutical companies and patients for drug safety and quality, but also promotes transparency and reliability in the drug supply chain. The continuous improvement and improvement of drug cold chain transportation services will further promote the development of the global healthcare system and make greater contributions to human health and well-being.
