According to our (Global Info Research) latest study, the global Drug Eluting Beads market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Drug eluting bead is a therapy for the treatment of hypervascularized tumours. Drug eluting bead allows for embolization and local release of chemotherapy in the treatment of hepatic malignancy through the intra-arterial delivery of microscopes. Drug eluting bead provides an alternative therapeutic option in unresectable tumours. Drug eluting beads are widely used in primary and liver dominant metastatic disease of the liver. Drug eluting beads improves the safety and efficacy of transarterial chemoembolization (TACE) in hepatocellular carcinoma (HCC). The drug eluting bead is given through the catheter directly to the liver tumor. Giving chemotherapy with the bead is more beneficial, as the chemotherapy is gradually released from the beads. Slowly released chemotherapy from the bead destroys the tumor over a greater period of time. Drug eluting beads are new embolic agents that allows the continuous release of chemotherapeutic agents.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for
