Abstracts

The global Drug-loaded Pellets market size is expected to reach \$ 23767 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Drug-loaded pellets are small spherical oral solid dosage forms, typically ranging from 0.5 to 1.5 mm in diameter, produced by layering or extrusion-spheronization processes in which active pharmaceutical ingredients (APIs) are coated onto inert cores or embedded within a matrix. These pellets are widely used in capsules, sachets, and multiple-unit pellet systems (MUPS) tablets to achieve controlled release, taste masking, and improved bioavailability. From a value chain perspective, upstream includes APIs, excipients (such as sugar spheres, microcrystalline cellulose, and polymers), and coating materials; midstream involves pelletization technologies, coating processes, drying, and quality control; downstream demand comes from pharmaceutical companies, contract development and manufacturing organizations (CDMOs), and hospitals and retail pharmacies distributing finished dosage forms. In 2025, the average selling price is approximately US\$0.12 per unit (pellet equivalent), with global production reaching about 125 billion units. The industry maintains gross margins of 35%–58%, supported by formulation know-how, regulatory barriers, and sustained demand for modified-release oral drugs.

This report studies the global Drug-loaded Pellets production, demand, key manufacturers, and key regions.
