Abstracts

According to our (Global Info Research) latest study, the global Drug Metabolism and Pharmacokinetics (DMPK) Service market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Drug Metabolism and Pharmacokinetics (DMPK) Service help support drug developers in understanding the Absorption, Distribution, Metabolism, and Excretion (ADME) processes of specific compounds or drugs. DMPK projects cover a drug development program from the discovery, candidate selection, Investigational New Drug (IND) enabling, through New Drug Application (NDA) stages. ADME is a subset of DMPK, focusing on the absorption, distribution, metabolism, and excretion of drugs. In addition to ADME, DMPK adds pharmacokinetics including considerations of dosage regimens, optimal dosage frequencies, and factors affecting drug efficacy and safety. DMPK studies are crucial in evaluating the pharmacokinetic behavior of potential drug candidates, optimizing dosing regimens, and bridging their safety and efficacy before advancing to later stages of development. DMPK studies include a range of in vitro and in vivo assays to understand how the body interacts with a drug or compound. To be more specific, these studies include in vitro ADME (Absorption, Distribution, Metabolism, and Excretion), rodent pharmacokinetics, large animal pharmacokinetics, metabolites profiling and identification, mass balance and tissue distribution, etc.
