Abstracts

Melanoma is the type of cancer, in which the normal melanin-producing cells called melanocytes are turned into cancerous cells. Melanoma is usually, but not always cancer of the skin and is the most dangerous type of cancer. Mutation in melanin-producing melanocytes leads to uncontrolled division of cells forming the malignant tumor. Mainly there are three general categories of melanoma as Cutaneous, mucosal and ocular. Cutaneous melanoma is melanoma of the skin and is most common because most pigment cells are found in the skin. Mucosal melanoma is melanoma of mucous membrane of the body, including the mouth, the nasal passages, the throat, the vagina or the anus. The rare ocular melanoma or uveal melanoma occurs in the eye.
