## Abstracts

The global Dry Adhesive market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Dry adhesive refers to an adhesive substance that does not require the application of liquid or solvent to create bonding. Instead of using a wet or sticky substance, dry adhesives typically rely on mechanisms such as microstructures, van der Waals forces, or intermolecular interactions to adhere to surfaces. These adhesives are often characterized by their ability to attach and detach without leaving a residue, making them versatile in applications ranging from medical devices to robotics.
