A dry aging refrigerator is a specialized appliance designed to age meat, particularly beef, under controlled conditions of temperature, humidity, and air circulation. This process enhances the meat's flavor and tenderness by allowing natural enzymes to break down muscle fibers over time, typically ranging from a few weeks to several months. The refrigerator prevents spoilage by maintaining low humidity and constant airflow, while also forming a protective crust on the meat's surface that is later trimmed. Dry aging refrigerators are used by gourmet restaurants, butchers, and home enthusiasts to produce premium-quality aged meat.
