Abstracts

According to our (Global Info Research) latest study, the global Domestic Smoke Alarms market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Smoke Alarms are primarily used in domestic residential situations. They are different from the Smoke Detectors used in Fire Detection and Alarm Systems because they have a built-in alerting device, and are designed, tested, and manufactured to different standards. The most common examples are the battery-operated units available in many hardware stores.

Commercially-available domestic smoke alarms are usually either ionisation chamber or photoelectric (light scattering) types. Considerable debate has taken place in the media as to which technology gives better performance, especially considering the price difference between the two is minimal (historically, photoelectric was considerably more expensive and drained batteries much faster).
