Abstracts

Dry containers are available in 20' and 40' sizes and are manufactured either from steel or aluminum. These containers are suitable for numerous types of cargo. Dry containers are totally enclosed and weatherproof, with rigid side walls, rigid roofs, and floors. At least one of the end walls is equipped with doors to facilitate the transport of a variety of cargo. These containers can carry all types of “dry” goods, including ready-to-wear clothing, textiles, consumer goods and sundries, and goods that are packed in cartons, bags, drums, boxes, cases, bales, and pallets. These types of containers are also used for certain types of bulk cargo.

Scope of the Report:

This report focuses on the Dry Container Fleet in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Intermodal transportation is gaining popularity because it requires low investments and is highly efficient and environmental friendly. This transportation offers door-to-door delivery along with a shorter delivery time. It also ensures the safety of the cargo and involves the use of different routes. Intermodal transportation involves only a few idle periods during the operation and is easy to track. Shippers highly prefer intermodal transportation due to the introduction of technological advancements such as computerized vehicle routing, online freight exchange, and active traffic management, driving the dry container fleet market size.

The dry container fleet market is highly competitive due to the presence of Chinese

manufacturers who provide most of the services. The growing focus of vendors towards gaining more market shares will strengthen the competitive environment of this market.
