According to our (Global Info Research) latest study, the global Dry Electrode Forming Machine market size was valued at US\$ 426 million in 2024 and is forecast to a readjusted size of USD 2107 million by 2031 with a CAGR of 25.6% during review period.

The dry electrode forming machine is the core equipment for manufacturing dry electrodes. Its core process is to directly form the electrode active material into a dense electrode layer by physical means without the need for solvents or binders. The dry process eliminates the steps of slurry preparation, coating, drying, etc. of the traditional wet process. It has the advantages of environmental protection, low energy consumption, and high material utilization. It is especially suitable for the requirements of all-solid-state batteries for dense electrode-electrolyte interfaces, but the technical difficulty is high.
