Abstracts

According to our (Global Info Research) latest study, the global Dry Film Photoresist Stripper Solution market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Dry film photoresist stripper solution apply to remove Dry Film Photo resist from most alkaline processed resists. Dry film photoresists have become the most widely used plating and etching resists for photochemical machining operations. They are classified into solvent, semi-aqueous and full aqueous resists, based on the type of chemistry required to place the resist. Solvent resists use chlorinated solvents for both developing and stripping. Semi-aqueous resists are developed in a solution of weak alkali and water miscible solvent. Full aqueous resists are usually developed with weak alkali alone. They can be stripped in hot alkali, but performance of alkali-only strippers is barely adequate for many production operations. Demands for higher strip rates and loading force many users of aqueous resist to use a semi-aqueous stripper: either a homebrew solution of a glycol ether and caustic or a proprietary blend of chemicals.
