## Abstracts

The global Dry-film Preservatives market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Dry-film preservatives are biocides added to inhibit or control the fungal growth for interior paint systems and fungal and algal growth for exterior paint systems. Temperature, humidity, sunlight accelerate the growth of fungi and algae leading to visible material destruction resulting in a loss of quality. Dry film preservatives provide protection of surfaces against the growth of microorganisms.

This report studies the global Dry-film Preservatives production, demand, key manufacturers, and key regions.
