According to our (Global Info Research) latest study, the global Dry Gas Seal Control System market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Dry gas seal control system is a sealing system used for rotating equipment (such as centrifugal compressors, pumps, etc.) to prevent gas or liquid leakage and maintain pressure balance inside and outside the equipment. Dry gas sealing control systems usually consist of dry gas sealing devices, sealing control panels, sensors, air source units and other components. The working status of the sealing system is monitored and adjusted through the control panel to ensure that the equipment does not leak when rotating at high speed. This sealing system is suitable for equipment under harsh working conditions such as high temperature, high pressure, corrosive media, etc. It improves the reliability and safety of the equipment, extends the service life of the equipment, and reduces maintenance costs.
